## **Cayuga County Health Department & Auburn Community Hospital**

### **2016 Community Health Assessment**

### **2016-2018 Community Health Improvement Plan & Community Service Plan**

#### **Cover Page**

1. **Identify county/counties or service area covered in this assessment and plan:**  
The 2016 Community Health Assessment and Combined Improvement Plan will cover Cayuga County.
2. **Participating Local Health Department(s) (LHDs) and contact information:**  
Cayuga County Health Department  
8 Dill Street  
Auburn, NY 13021  
(315) 253-1560
3. **Participating Hospital/Hospital System(s) and contact information:**  
Auburn Community Hospital  
17 Lansing Street  
Auburn, NY 13021  
(315) 255-7011
4. **Name of coalition/entity, if any, completing assessment and plan on behalf of participating counties/hospitals:**  
CNY Care Collaborative Assessment completed by the John Snow Institute in October 2014.

**Executive Summary – maximum four double-spaced pages.**

1. What are the Prevention Agenda priorities and the disparity you are working on with your community partners including the local health department and hospitals for the 2016-2018 period?

The Cayuga County Health Department (CCHD) and Auburn Community Hospital (ACH) along with our community partners have agreed to select the following Prevention Agenda priorities Prevent Chronic Diseases and Promote Healthy Women, Infants & Children. Prevent Chronic Diseases focus areas will include: reduce obesity in children and adults; increase access to high quality chronic disease preventive care and management in both clinical and community settings; and attention to the built environment. Promote Healthy Women, Infants and Children focus areas will include: maternal, infant and child health. Our focus will be on those living outside the City of Auburn, in rural communities, with limited access to health care providers and public transportation. In addition, we will work to outreach to low income residents.

2. What has changed, if anything, with regard to the priorities you selected since 2013 including any emerging issues identified or being watched?

Prevent Chronic Diseases Priority: Overweight and obesity rates have remained relatively consistent. Childhood obesity rates reflect improvement, but are still not meeting the State average or Prevention Agenda Goal. The percentage of Cayuga County adults who are obese remains steady and our percentage well exceeds the State average and Prevention Agenda Goal. The rate of hospitalizations for short-term complications of diabetes has worsened.

Promote Healthy, Women, Infants and Children: The percentage of Cayuga County infants exclusively breastfed in the hospital has remained constant and above the State average and Prevention Agenda goal; however, the issue is with duration. Most women surveyed through our well-check calls stopped breastfeeding between zero to three months

of the child's age. This is below the Healthy People 2020 Benchmark target of 60.6% for babies who were breastfed at six months.

Promote Healthy Women, Infants and Children continues to be a priority area for us as some areas have worsened including; premature births of minorities compared to white non-Hispanics, premature births for Medicaid clients compared to non-Medicaid clients and unintended pregnancies for minorities compared to white non-Hispanics.

These highlighted concerns merit attention and are impacted by behavioral risk factors, environmental risk factors (natural and built), socioeconomic factors, policy (site specific and regional), and other aspects of our community, such as unique geography.

3. What data did you review to identify and confirm existing priorities or select new ones?

CCHD and ACH reviewed DSRIP data including the Community Health Assessment completed by the John Snow Institute in October 2014. Our agencies also reviewed the New York State Department of Health (NYSDOH) Prevention Agenda County Dashboard Indicators and regional health data was reviewed from the Healthconnections website. We feel very confident that three of these data sources are very reflective of the needs of what is occurring in our community.

4. Which partners are you working with and what are their roles in the assessment and implementation processes?

CCHD and ACH have been engaging and soliciting the Cayuga Community Health Network (CCHN) as a partner on specific parts of our assessment and planning process. CCHN, our local rural health network is the subcontractor of Population Health Improvement (PHIP) and Local IMPACT programming. Other community partners engaged include East Hill Family Medical, Inc. a Federally Qualified Health Center (FQHC). CCHD staff have great relationships with many local school districts who share anecdotal information. These agencies will be partners in the initiatives that relate to their

work and will support our combined efforts of improving the health through promotion of the CHIP/CSP.

5. How are you engaging the broad community in these efforts?

CCHD's positive reputation and willingness to maintain strong collaborations and partnerships within our community will augment the health outcomes of our population. We have excellent working relationships with our local and state government organizations including: Parks and Trails, Emergency Management Office, Office for the Aging, Sheriff Department, Police Department, Fire Department, Human Services, Mental Health and Veterans. We have the support and involvement of our local Legislature, Board of Health and cooperation with state representatives. Furthermore, we are involved in statewide organizations focused on health, special needs and the environment.

Our efforts also expand across non-governmental organizations, foundations and private entities to reach special populations in need, including: American Red Cross; United Cerebral Palsy/ Gavras Center; food pantries; Cayuga Seneca Community Action Agency (CSCAA); Rural Health Network; churches; our local hospital, ACH; FQHCs; migrant labor outreach; farmers' market and other regional and local entities and individuals. We continue to work with CSCAA to assist them with their Community Needs Assessment. We solicit information from our local Human Services Coalition and United Way. Our nine school districts and two colleges in our county are great collaborators. We have great emergent and ongoing relationships with our media partners: local papers; radio stations; television stations (public access and cable). Our messaging occurs online with a recently updated website and on social media sites including Facebook and Youtube.

6. What specific evidence-based interventions/strategies/activities are being implemented to address the specific priorities and the health disparity and how were they selected?

For Prevent Chronic Diseases we continue to make referrals to Chronic Disease Self- Management program and National Diabetes Prevention Program. We continue to support the implementation of Complete Streets policies, assist schools with their local school wellness policies, continue to encourage local providers to become Breastfeeding Friendly Practices, work with public and private employers to implement breastfeeding friendly policies, and promote interventions to prevent or manage chronic diseases.

For Promote Healthy Women, Infants and Children we will utilize our Cayuga County Nurse-Family Partnership Program (NFP). This is an evidence-based program administered by the CCHD which improves the health of mom and baby and increases access to healthcare and community programming. Collaboratively the NFP and Cayuga County Women, Infants and Children Program, will work with ACH and other community partners to increase the number of babies who are breastfed.

7. How are progress and improvement being tracked to evaluate impact? What process measures are being used?

The evaluation process for the activities is documented in the Plan. The CCHD along with ACH will continuously evaluate projects and activities that have been selected. This on-going evaluation will ensure that our work is being held to the highest of standards. CCHD has a Quality Assurance (QA) program that reports to our Board of Health quarterly and activities of the CHIP will be evaluated by our QA team. Goals and objectives may be revised at any point during the 2016 – 2018 time frame to better attain participation and adherence in accomplishing goals, both short term and long term. Self-imposed time lines are attached to certain activities to encourage adherence to action in a finite period of time in order to ascertain behavioral change or practice over a longer period. We will measure and monitor our data throughout the year and compare as able to the previous year.

## **Report**

1. **Provide a short description of the community being served and how the service area has been defined. This could be one county or several counties or parts of several counties. If this is a regional assessment and plan, the plan must describe each county's health issues and identify the process each county used to identify its priorities and how it will contribute to addressing them.**

Nearly 55.3 miles long and 24.18 miles wide, Cayuga County's land area stretches from the shores of Lake Ontario into the heart of the Finger Lakes Region and the Southern Tier of Central New York. According to the 2014 American Community Survey population estimate, Cayuga County has a total population of 78,823 residents. Located in the center, Auburn is the only City and largest community in the County. The Cayuga County Health Department's physical offices are located in the Downtown Business District of the City of Auburn. Auburn Community Hospital is the only hospital in the County, and is located in the northern section of the City of Auburn.

Thirty-four percent of Cayuga County's total population resides in Auburn, which includes about 10 percent of the County's minority population, mostly African American. This dense concentration of the county's population, health care providers and Hospital is one of the primary reasons why most of the early initiatives will be in the City of Auburn. Downtown Auburn is the epicenter for most of the historical sites, businesses, restaurants, the Auburn Farmer's Market, hotels, city and county government agencies, public housing and three of the County's senior citizen complexes.

One of the largest segments of the population are Baby Boomers. These are individuals ages 65 and older and make up seventeen percent of the County's population. This group, in particular, has already been diagnosed with one or more chronic diseases, which is why our focus will be on managing and preventing those conditions from getting worse.

2. Provide a short summary of health and other data that was reviewed to identify health issues of concern in the community. This could include the Prevention Agenda Dashboard, County Health Rankings and/or other sources of data on demographics and health issues facing the community and the underlying conditions that contribute to their health.

Obesity and diabetes disproportionately affects low-income children and adults, African American and Hispanic residents and those with disabilities. The 2015 U.S. Census estimate shows that 12.7 percent of Cayuga County residents are living in poverty, with 22.2 percent of children under 18 years of age living in poverty.

From 2012-2014, the New York State Department of Health reported that the percentage of Cayuga County elementary school students who were overweight or obese was 36.4 as compared to the NY Value of 33.1 percent, which is third highest in the CNY region. Furthermore, the percentage of Cayuga County children in grades 7 and 10, classified as overweight or obese was 37.5 as compared to the NYS Value of 35.2 which is fourth highest in the CNY region. The Dashboard; however, indicates an improvement in childhood and adolescent obesity rates. With Cayuga County at 21.4 percent this exceeds the New York State percentage of 17.3 and the NYS Prevention Agenda 2018 goal of 16.7 percent, and ranks us second highest in the CNY region.

Thirty-three percent of Cayuga County adults are obese, compared to the New York State percentage of 24.9 and the Prevention Agenda Goal of 23.2, which is third highest in the Central New York (CNY) region. Cayuga County is second highest in the region for adults who are sedentary at 30.7 percent and second highest for high blood pressure prevalence at 35.7 percent.

The NYS Prevention Agenda County Level Dashboard shows that the Cayuga County rate of hospitalizations for short-term complications of diabetes is 7.5 compared to the Prevention Agenda Goal of 4.86. This is very alarming considering that in 2008, we

were at 4.3. Specifically, Auburn Community Hospital's number one reason for hospital admission is Diabetes, with 163 admissions occurring in 2015 and 92 admissions thus far, in 2016.

Cayuga County has an aging population with 17 percent of the total population being over 65 years of age. Our aging population ranks the worst when it comes to many Community Dashboard Indicators (provided by HealthConnections), one being second highest in the region for Preventable Hospital Stays for the Medicare population. Community Dashboard Indicators reflect that Cayuga County ranks highest in the region for both the percentage of adults 65 years and older treated for hyperlipidemia and hypertension for the Medicare population. Also, this age group accounted for the largest percentage of Cayuga County residents with hospitalizations due to long-term complications from diabetes. Special attention will be given to this group as many of them have been diagnosed with one or more chronic diseases and some are having issues managing their condition(s).

According to the Community Dashboard Indicators, 15.9 percent of Cayuga County residents have a disability. This ranks Cayuga second highest in the region behind Oneida and Oswego Counties respectively tied at 16.1 percent. In addition, thirty- eight percent of Cayuga County residents who have a disability are over the age of 65.

The percentage of WIC mothers who are breastfeeding after six months is only 16.6% and continues to be far below the state rate of 40.6% and the prevention goal of 50%. Rates of pre-pregnancy obesity in women who participated in the WIC program remained high, at nearly 32%. Also, According to the most recent data 21.7% of all Cayuga County school students (elementary, middle and high school) were obese. The county was

the second highest in the state, excluding NYC. Unlike other counties, Cayuga had a higher percent of obese children in elementary school.

It is important to note that Cayuga County lacks fluoridated water. Public water is supplied by the City of Auburn to its residents and outlying towns which purchase water from the City. According to the City of Auburn Water Quality Report, public water is provided to close to 43,000 Cayuga County residents (2015). Cayuga County residents not supplied water by the City of Auburn rely on wells for their water. (1)

For 2010-2012, the percentage of Cayuga County third graders with evidence of untreated decay is 40.4. This exceeds the New York State (NYS) percentage of 24.0 and the NYS 2018 Objective at 21.6 (2). Updated third grade surveillance data is not available at this time.

The Community Dashboard Indicators made available by HealthConnections states that Cayuga County has the worst Primary Care Provider rate in the CNY region with 28 primary care providers per 100,000 residents. These same indicators rank Cayuga County the worst in the CNY region for access to supermarkets and grocery stores. As we begin the discussion of access to health care providers, grocery stores and government offices, most of which are located in the City of Auburn, we must start the conversation around transportation and those who would benefit from public transportation (i.e. people with disabilities, low-income residents who do not own a vehicle and senior citizens who do not drive).

3. Identify the two Prevention Agenda priorities and the health disparity being addressed with community partners including LHDs and hospitals and provide a description of the community engagement process that was used to select or confirm existing priorities.

The priority areas identified that the CCHD and ACH plan to collaborate on are

Preventing Chronic Diseases and Promote Healthy Women, Infants and Children. These have been determined due to the significant need in Cayuga County as demonstrated by the supportive data listed previously in this report. The Cayuga County Health Department and Auburn Community Hospital reviewed DSRIP data including the Community Health Assessment completed by the John Snow Institute in October 2014. Our agencies also reviewed the New York State Department of Health Prevention Agenda County Dashboard Indicators to compare data. In addition, regional health data was reviewed from the Healthconnections website. Our findings are very similar and are a common theme for many of our community partners. Cayuga County residents with low incomes, those living in poverty and those with disabilities have limited access to health care providers, supportive services/programs, grocery stores and public transportation. These issues affect many different factors in a person's life, include their health.

4. This information will be in workplan format, please see attached workplan:
5. Briefly describe the process that will be used to maintain engagement with local partners over the next three years, and the process that will be used to track progress and make mid-course corrections.

Involvement and commitment of our partners is critical to the success of these health improvement initiatives. To that end, we work diligently to maintain open communications, address issues directly, and communicate verbally, in writing and more importantly face to face to build professional familiarity.

We have planned quarterly face to face meetings with some partners and will establish such meetings with others. We plan to share the CHIP via various venues to get the commitment and buy in from private sector, governmental support, not for profit sector, schools, health centers and individuals.

We have created the CHIP to be dynamic, to help us in measuring success and to build in the capacity to change. It is our intention to have a thorough review of the entire plan at least annually to assess the impact our efforts are having. Aspects of the plan will be reviewed on an on-going basis and quarterly. Community partners and involved entities are critical to the evaluation of the plan in order to fit the needs of our constituents and measure success of our efforts. A record of our formal meetings will be kept to add to our evaluation component.

6. Briefly describe plans for the dissemination of the executive summary to the public and how it will be made widely available to the public including providing the website where it can be located.

This entire report will be available on the homepage of our websites, posted on our respective Facebook pages and discussed at community meetings and coalitions. The Health Department website is: [www.cayugacounty.us/health](http://www.cayugacounty.us/health) and our Facebook page can be found by searching Cayuga County Health Department. The website link for Auburn Community Hospital is [www.auburnhospital.org](http://www.auburnhospital.org). Information and updates will also be provided to the Cayuga County Legislature, Board of Health, county departments and community partners. Auburn Community Hospital will share this information with staff, including the hospital-owned provider groups.

**Priority Area – Prevent Chronic Disease**  
**Focus Area – Increase Access to High Quality Chronic Disease Preventive Care and Management in Both Clinical and Community Settings**

**Background Information: Obesity in Adults**

Thirty-three percent of Cayuga County adults are obese as compared to the New York State percentage of 24.9 and the Prevention Agenda Goal of 23.2, which is third highest in the Central New York (CNY) region. Cayuga County is second highest in the region for adults who are sedentary at 30.7 percent and second highest for high blood pressure prevalence at 35.7 percent. (1)

The NYS Prevention Agenda County Level Dashboard shows that the Cayuga County rate of hospitalizations for short-term complications of diabetes is 7.5 compared to the Prevention Agenda Goal of 4.86. This is very alarming considering that in 2008, we were at 4.3. Specifically, Auburn Community Hospital's number one reason for hospital admission is Diabetes, with 163 admissions occurring in 2015 and 92 admissions thus far, in 2016.

**Partners:** Cayuga Community Health Network, Auburn Community Hospital and local providers.

**Priority Area – Healthy Women, Infants and Children**  
**Focus Area – Maternal and Infant Health**

**Background Information: Breastfeeding**

The percentage of Cayuga County babies who are exclusively breastfed in the hospital is 64.7. This exceeds the New York State (NYS) percentage of 43.1 and the NYS 2018 Objective at 48.1; however, Cayuga County breastfeeding rates drop-off upon discharge from the hospital (1). The Healthy People 2020 Benchmark for breast-feeding in early post-partum is 81.9% or more (2).

Healthy People 2020 Benchmark for babies who were breastfed at six months target is 60.6% (2). The 2016 Centers for Disease Control and Prevention Breastfeeding Report Card shows New York State breastfeeding rates at six months were 55.8 and at twelve months 33.6 (3). When looking at low-income women enrolled in the Women, Infants and Children Program (WIC), the percentage of Cayuga County WIC mothers breastfeeding at six months has remained steady for the past ten year. The 2012 – 2014 data shows Cayuga County WIC mothers breastfeeding at least six months was 19%, which is second lowest in the Central New York region, only behind Oneida County (4).

Last round of our CHIP (2013-2016), we decided to work with Auburn Community Hospital for well-check calls on women who consent to being contacted by Health Department staff. The well-check calls assessed breastfeeding status. Results from year#1 (May 2014 – May 2015) show that there were 479 births at ACH during that timeframe.

- We collected 287 consents (60%).
- 109 wished to be contacted (40%)
- Of the 71 women (65%) we reached by initial call:
  - 50 women were breastfeeding (70%).
- These 50 would be followed up with to assess breastfeeding status at 3, 6, 9, and 12 months.
  - 32 of the 50 (64%) were lost to follow-up throughout the year.
  - 18 of the 50 (36%) were contacted over one year.

Of the 18 women contacted over year one, fifteen stopped breastfeeding between 0-3 months, one mother stopped between 3-6 months, and two women stopped between 6-9 months. Not one mother we contacted breastfed for the entire first year of their child's life.

Auburn Community Hospital reports 387 births through December 11, 2016. As of December 12, 2016 for the 2016 well-check calls, we collected 243 consents (63%).

- 104 wished to be contacted (43%)
- Of the 79 women (76%) we reached by initial call:
  - 63 women were breastfeeding (78%).
  
- These 63 women who were breastfeeding at initial call were followed up with to assess breastfeeding status at 3, 6, 9, and 12 months.
  - Only 18 women were still breastfeeding at 3 months, only 9 at 6 months and 2 at 9 months.

**Partner:** Auburn Community Hospital
