Quality Measure Threshold Changes with the April 2022 Refresh

In March 2019, CMS released memorandum QSO-19-08-NH, which outlined a plan to update the quality measure (QM) thresholds every six months. The plan was to increase the thresholds by 50% of the average rate of improvement in QM scores. For example, if there is an average rate of improvement of 2%, the QM rating thresholds would be raised 1%. Similar to setting new thresholds, this action also aims to incentivize continuous quality improvement. Additionally, it will reduce the need to have larger adjustments to the thresholds in the future. The initial threshold changes were scheduled to occur in April 2020 but were put on hold due to the COVID-19 Public Health Emergency. CMS will implement the QM threshold changes with the April 2022 refresh and a new Five-Star Quality Rating System Technical Users' Guide has been released with the updated QM rating thresholds.
